(54) SCREEN DISPLAY DEVICE

(57)Abstract:

PURPOSE: To obtain a screen display device to be switched to blue back display when a composite video signal inputted from the outside becomes nonsignal by switching a synchronizing signal by controlling a signal to set internal synchronization or external synchronization by a synchronizing signal detection circuit to detect the presence of the composite video signal inputted from the outside and the output signal of the synchronizing signal detection circuit. CONSTITUTION: When the composite video signal inputted from the outside disappears, the synchronizing signal detection circuit 4 detects the synchronizing state of the composite video signal, and determines the presence or the absence of the signal. Analog switches 1 and 2 are controlled by the output signal of this synchronizing signal detection circuit 4. Here, when the non-signal is detected, the composite video signal outputted from a composite video signal generation circuit 3 is outputted through the analog switch 2, and a screen is switched to the blue back display.

CLAIMS

[Claim(s)]

[Claim 1] The screen-display equipment characterized by to prepare the composite-video-signal generating circuit which will output a blue back signal if the composite video signal which controls the signal which sets up an internal period or an external synchronization by the output signal of the synchronizing signal detector which detects the existence of the composite video signal inputted from the exterior in the screen-display equipment displayed on a television screen, and the above-mentioned synchronizing signal detector, switches a synchronizing signal, and is inputted from the exterior is lost.

DETAILED DESCRIPTION

[Detailed Description of the Invention]

[0001]

[Industrial Application] This invention relates to the superimposition display and blue back display especially in a composite video signal about the screen-display equipment which displays an alphabetic character and a pattern on a television screen.

[0002]

[Description of the Prior Art] Drawing 2 is the block diagram showing the flow of the signal of the composite video signal of the internal synchronization or external synchronization in the configuration of conventional screen-display equipment, and the analog switch which controls the composite video signal into which 1 is inputted from the exterior, and 2 are analog switches which control the signal of the composite-video-signal generating circuit 3 in drawing. [0003] Next, actuation is explained. The part which needs screen-display equipment about actuation of the composite video signal of an internal synchronization or an external synchronization is explained hereafter, and explanation is omitted about the circuit part of other screen-display equipments. An external composite video signal is controlled by the analog switch 1, and a signal passes only at the time of an external synchronization, and it turns into a composite video signal. Moreover, a composite video signal is generated from the composite-video-signal generating circuit 3 at the time of an internal synchronization, it is controlled by the analog switch 2, and is outputted as a composite video signal. These analog switches 1 and 2 are controlled by the synchronous switch signal.

[0004]

[Problem(s) to be Solved by the Invention] Since the non-signal from the outside was outputted as it was even if the composite video signal inputted from the exterior was lost, since conventional screen-display equipment was constituted as mentioned above, the television screen turned into black and a noise screen,

and since the Horizontal Synchronizing signal inputted from the exterior and a Vertical Synchronizing signal also turned into a non-signal, there was a problem that a display by superimposition could not be performed, further.

[0005] This invention will aim at obtaining the screen-display equipment switched to a blue back display, if it was made in order to cancel the above troubles, and the composite video signal inputted from the exterior turns into a non-signal.

[0006]

[Means for Solving the Problem] The screen-display equipment concerning this invention controls the signal which sets up an internal synchronization or an external synchronization by the output signal of the synchronizing signal detector which detects the existence of the composite video signal inputted from the exterior, and a synchronizing signal detector, switches a synchronizing signal, and if the composite video signal inputted from the exterior is lost, it will prepare the composite-video-signal generating circuit which outputs a blue back signal. [0007]

[Function] The screen-display equipment in this invention detects that the composite video signal inputted from the exterior turned into a non-signal, and is automatically switched to a blue back display.

[0008]

[Example] The example 1 of this invention is explained about drawing below example 1. Here, explanation about the required part of screen-display equipment is given about actuation of the composite video signal of an internal synchronization or an external synchronization, and it omits about the circuit part of other screen-display equipments. Drawing 1 is the block diagram of the screen-display equipment by the example 1 of this invention. In drawing, they are the analog switch with which 1 passes an external composite video signal, the analog switch which passes the composite video signal which 2 generated inside, the composite-video-signal generating circuit which 3 makes generate a composite video signal inside, and the synchronizing signal detector where the composite video signal into which 4 is inputted from the exterior detects having

become a non-signal.

[0009] Next, actuation is explained. If the composite video signal inputted from the exterior is lost, the synchronizing signal detector 4 will detect the synchronous condition of a composite video signal, and will determine the existence of a signal. Analog switches 1 and 2 are controlled by the output signal of this synchronizing signal detector 4. Here, if a non-signal is detected, the composite video signal outputted from the composite-video-signal generating circuit 3 will be outputted via an analog switch 2, and a screen will be switched to a blue back display.

[0010]

[Effect of the Invention] Screen-display equipment characterized by preparing the composite-video-signal generating circuit which will output a blue back signal if the composite video signal which prepares the synchronizing signal detector which detects the existence of the composite video signal inputted from the exterior, controls the signal which sets up an internal synchronization or an external synchronization with the output signal of the above-mentioned synchronizing signal detector, switches a synchronizing signal, and is inputted from the exterior according to this invention as mentioned above is lost. It detects having come to be alike, and since the synchronizing signal detector switched to a blue back display was prepared, if a composite video signal turns into a non-signal, the effectiveness of being automatically switched to a blue back display will be acquired.

(54) 【発明の名称】 画面表示装置

(57)【要約】

【目的】 外部から入力される複合ビデオ信号が無信号になると自動的にブルーバック表示に切り換えられる画面表示装置を得る。

【構成】 外部より入力される複合ビデオ信号の有無を検出する同期信号検出回路 4 の出力信号で内部同期または外部同期を設定する信号を制御して同期信号の切り換えをし、外部より入力される複合ビデオ信号が無くなると内部同期のブルーバック信号を出力する複合ビデオ信号発生回路 3 を設ける。

1

【特許請求の範囲】

【請求項1】 テレビ画面に表示する画面表示装置にお いて、外部より入力される複合ビデオ信号の有無を検出 する同期信号検出回路と、上記同期信号検出回路の出力 信号で内部周期または外部同期を設定する信号を制御し て同期信号の切り換えをし、外部より入力される複合ビ デオ信号が無くなるとブルーバック信号を出力する複合 ビデオ信号発生回路を設けたことを特徴とする画面表示 装置。

【発明の詳細な説明】

[0001]

【産業上の利用分野】この発明は、テレビ画面上に文字 やパターンを表示する画面表示装置に関し、特に複合ビ デオ信号におけるスーパーインポーズ表示及びブルーバ ック表示に関するものである。

[0002]

【従来の技術】図2は、従来の画面表示装置の構成のな かの、内部同期または外部同期の複合ビデオ信号の信号 の流れを示すブロック図であり、図において、1は外部 より入力される複合ビデオ信号を制御するアナログスイ 20 ッチ、2は複合ビデオ信号発生回路3の信号を制御する アナログスイッチである。

【0003】次に動作について説明する。以下、内部同 期、または外部同期の複合ビデオ信号の動作について、 画面表示装置の必要な部分について説明し、その他の画 面表示装置の回路部分について説明を省略する。外部の 複合ビデオ信号はアナログスイッチ1で制御され、外部 同期のときだけ信号が通過して複合ビデオ信号となる。 また、内部同期のときは、複合ビデオ信号発生回路3か ら複合ビデオ信号を発生させて、アナログスイッチ2で 30 制御され、複合ビデオ信号として出力される。このアナ ログスイッチ1および2は同期切り換え信号で制御され る。

[0004]

【発明が解決しようとする課題】従来の画面表示装置は 以上のように構成されているので、外部より入力される 複合ビデオ信号がなくなっても、そのまま外部からの無 信号を出力するので、テレビ画面が黒色やノイズ画面に なり、さらに、外部より入力される水平同期信号や、垂 直同期信号も無信号になるため、スーパーインポーズで 40 の表示ができないという問題があった。

【0005】この発明は上記のような問題点を解消する ためになされたもので、外部より入力される複合ビデオ 信号が無信号になるとブルーバック表示に切り換えられ る画面表示装置を得ることを目的とする。

[0006]

【課題を解決するための手段】この発明に係わる画面表 示装置は、外部より入力される複合ビデオ信号の有無を 検出する同期信号検出回路と、同期信号検出回路の出力 信号で内部同期または外部同期を設定する信号を制御し 50 て同期信号の切り換えをし、外部より入力される複合ビ デオ信号が無くなるとブルーバック信号を出力する複合 ビデオ信号発生回路を設けたものである。

[0007]

【作用】この発明における画面表示装置は、外部より入 力される複合ビデオ信号が無信号になったことを検出 し、自動的にブルーバック表示に切り換えられる。

[0008]

【実施例】実施例1.以下、この発明の実施例1を図に 10 ついて説明する。ここで、内部同期または外部同期の複 合ビデオ信号の動作について、画面表示装置の必要な部 分についての説明をし、その他の画面表示装置の回路部 分については省略する。図1は、この発明の実施例1に よる画面表示装置のブロック図である。図において、1 は外部の複合ビデオ信号を通過させるアナログスイッ チ、2は内部で発生させた複合ビデオ信号を通過させる アナログスイッチ、3は内部で複合ビデオ信号を発生さ せる複合ビデオ信号発生回路、4は外部より入力される 複合ビデオ信号が無信号になったことを検出する同期信 号検出回路である。

【0009】次に動作について説明する。外部より入力 される複合ビデオ信号がなくなると、同期信号検出回路 4が複合ビデオ信号の同期状態を検出し、信号の有無を 決定する。この同期信号検出回路4の出力信号で、アナ ログスイッチ1および2が制御される。ここで、無信号 が検出されると、複合ビデオ信号発生回路3から出力さ れる複合ビデオ信号を、アナログスイッチ2を経由して 出力し、画面がブルーバック表示に切り換えられる。

[0010]

【発明の効果】以上のようにこの発明によれば、外部よ り入力される複合ビデオ信号の有無を検出する同期信号 検出回路を設け、上記同期信号検出回路の出力信号で内 部同期または外部同期を設定する信号を制御して同期信 号の切り換えをし、外部より入力される複合ビデオ信号 が無くなるとブルーバック信号を出力する複合ビデオ信 号発生回路を設けたことを特徴とする画面表示装置。に なったことを検出し、ブルーバック表示に切り換える同 期信号検出回路を設けたので、複合ビデオ信号が無信号 になると自動的にプルーバック表示に切り換えられると いう効果が得られる。

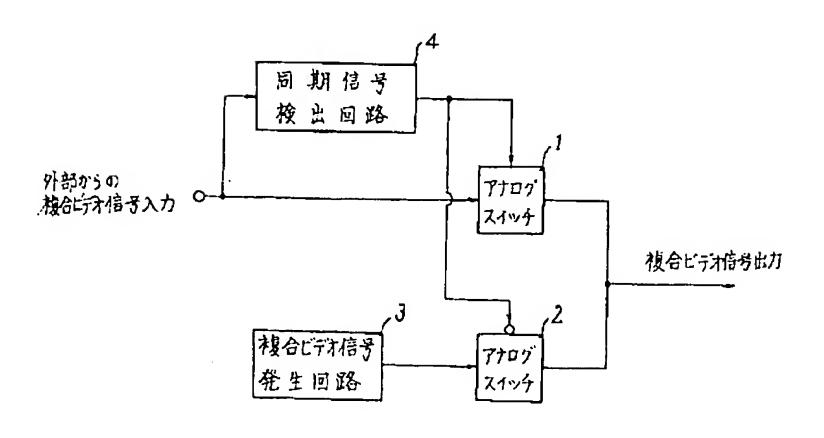

【図面の簡単な説明】

【図1】この発明の実施例1による画面表示装置を示す ブロック図である。

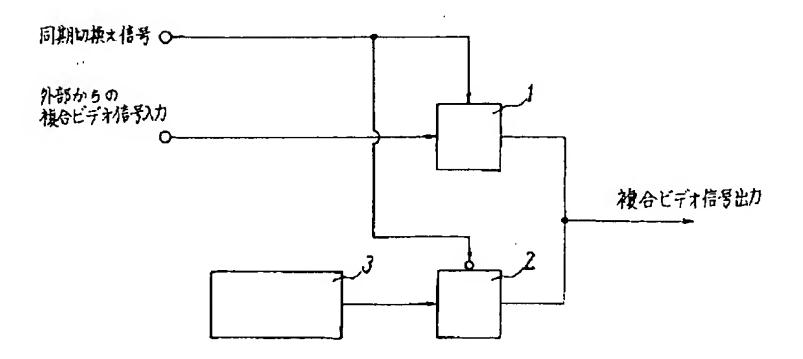

【図2】従来の画面表示装置を示すプロック図である。 【符号の説明】

- 1 アナログスイッチ
- 2 アナログスイッチ
